Shanks

A quick guide to the advantages of each shank and type of handpiece required.

CA/RA Metal Shank
Most popular style connection

CA/RA Plastic Shank
Versatile and economical shank

CA/RA Metal Short Shank
Designed for greater oral cavity access

SCREW IN SHANK
Provides the most stable vibration free use

SNAP-ON
The absence of a shank delivers the most economical & environmentally friendly cup

Snap-on adaptor not supplied with cups

Shapes

All our cups are available in regular, soft and extra soft.

RIBBED & WEBBED CUP

Designed with 4 webs and internal ribs, this cup delivers the optimum amount of prophy paste to help remove stains. The cup also has the ability to “flare” out and therefore reach subgingivally and into interproximal areas.

LATEX AND BPA FREE

SHORT RIBBED & WEBBED CUP

All the benefits of our standard cups but with its shorter length gives the advantage of greater access in to the oral cavity. When used in combination with a short shank and mini CA handpiece, the total size of the cup and handpiece head is reduced by over 30%. Particularly effective for patients with restricted access in the oral cavity or those sensitive to gag reflex.

LATEX AND BPA FREE

TURBINE BLADED CUP

Designed with nodules on the exterior surface to optimize interproximal polishing, stain and biofilm removal, and thus requiring less pressure and relieving user fatigue. Turbine blades keep paste in the cup reducing splatter whilst still allowing the cup to flare.

LATEX AND BPA FREE

Colours

The largest range of colours make identifying the grades of hardness simple, whilst adding a splash of colour to the surgery.

Our prophy cups are available in either single or assorted colour boxes.

REGULAR CUP

SOFT CUP

EXTRA SOFT CUP

SHORT TURBINE BLADED CUP

All the benefits of our standard cups but with its shorter length gives the advantage of greater access into the oral cavity. When used in combination with a short shank and mini CA handpiece, the total size of the cup and handpiece head is reduced by over 30%. Particularly effective for patients with restricted access in the oral cavity or those sensitive to gag reflex.

LATEX AND BPA FREE

POINT - ORTHODONTIC

Designed for accessing tight or hard to reach areas. Ideal for orthodontic or periodontal procedures where flexibility allows for the most efficient polishing. The fluted ribs also provide ridges which offer the most effective cleaning and polishing surface.

LATEX AND BPA FREE

Designed to flare to access interproximal & subgingival areas

Exterior nodules polish interproximal and subgingival areas

Easy access to tight interproximal areas

Ideal for orthodontic appliances

Shanks

A quick guide to the advantage of each shank and type of handpiece required.

CA/RA Metal Shank
Most popular style connection

CA/RA Metal Short Shank
Designed to provide greater oral cavity access

SCREW IN
Provides the most stable vibration free use

SNAP-ON
The absence of a shank delivers the most economical & environmentally friendly brush

Snap-on adaptor not supplied with brushes

Snap on available in flat & tapered only

Shapes

Which shape or size best suits my needs...

9 mm

1500 - 3000 rpm

9MM JUNIOR CUP

Our standard classic shaped nylon bristled brush. The most popular brush for polishing dentition, gold and amalgam fillings.

LATEX AND BPA FREE

7 mm

1500 - 3000 rpm

7MM MINI CUP

A smaller version of our popular Junior Cup. All the advantages of the Junior Cup but with greater access in the oral cavity.

LATEX AND BPA FREE

1500 - 3000 rpm

MICRO BRUSH

Designed for reaching areas with limited access, the nylon bristles are perfect for polishing in and around orthodontic appliances, interdental spaces, implants and cavities.

LATEX AND BPA FREE

Colours

The largest range of colours make identifying the brush hardness simple and adds a splash of colour to the surgery.

Including Extra Soft which is ideal for work around implants.

REGULAR BRUSH

White available in single colour boxes only.
Light blue, orange and lavender available in assorted boxes only.

SOFT BRUSH

Clear available in single colour boxes only.
Pink, lime, green and dark blue available in assorted boxes only.

EXTRA SOFT BRUSH

1500 - 3000 rpm

FLAT BRUSH

Our larger flat brush for greater coverage when polishing dentition, gold and amalgam fillings.

LATEX AND BPA FREE

1500 - 3000 rpm

TAPERED BRUSH

Our tapered brush gives greater coverage and the ability to pin point delicate areas on implants and orthodontic appliances.

LATEX AND BPA FREE

Junior cup and mini brush are designed for polishing dentition and amalgam fillings

Flat brush easily accesses surfaces and interproximal areas

Micro brush designed to access small, hard to reach areas that need precision

Tapered brush ideal for orthodontic appliances or areas of tight access

Why use a prophy angle?

Prophy angles fit most standard straight handpieces and this eliminates the need to buy expensive purpose built prophy handpieces. They come individually wrapped to improve infection control and their design prevents the need for disassembling handpieces so as to clean the inner mechanism and gears after use. Prophyl angles save time and this means saving money.

360° vs 60° reciprocating

Our standard range of prophy angle cups rotate 360° providing efficient, economical and safe polishing. Our 60° reciprocating heads take efficiency to a new level. They produce no heat and can therefore be used continually, saving time and money. There is no saliva, blood or prophy paste splatter and the lack of motion means no chance of gum or gingiva laceration. Simply a better choice.

90° vs 105°

Premium Plus prophy angles are available in two different angled heads: 90° or 105°. Both are ergonomically designed to provide comfortable fatigue free use and have precision crafted gearing to prevent vibration.

The choice is yours.

60° Reciprocating

Cups available in singular colours or assorted boxes.

Brushes available in single colour boxes of regular white, soft clear or extra soft yellow. Colours available in assorted boxes only.

TURBINE BLADED CUP	SHORT TURBINE BLADED CUP	FLAT BRUSH	TAPERED BRUSH	7MM MINI CUP

Turbine bladed cup holds prophy paste in place but allows the edge to flare producing better contact and more effective polishing. Exterior ridges polish interdentally, saving time and money.

All the advantages of the standard cup with a smaller, shorter cup allowing greater access to all areas in the oral cavity.

Our flat brush for greater coverage when polishing dentition, gold and amalgam fillings.

Our tapered brush gives greater coverage and the ability to pin point delicate areas on implants and orthodontic appliances.

Classically shaped brush provides efficient and effective action for polishing dentition, gold and amalgam fillings.
