our peel'n'stick x-ray sensor holders

Our peel-n-stick x-ray sensor holders are designed to securely hold a digital intraoral sensor in place during x-ray imaging. Simply peel off the adhesive backing, stick the sensor holder onto the sensor and position it in the patient's mouth. The holder keeps the sensor stable and properly aligned, ensuring accurate imaging while minimising patient discomfort.

4001

ANTERIOR BLUE

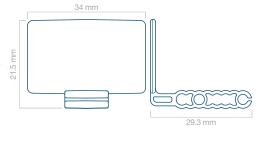

For positioning in the narrow anterior region, ensuring clear and stable imaging.

4003POSTERIOR YELLOW

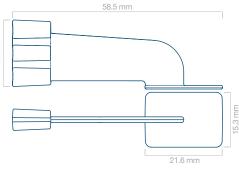

For positioning in the posterior area, where it can be difficult to maintain sensor placement due to the shape of the teeth and position in mouth.

4005 BITEWING RED

For bitewing positioning, holds sensor firmly in place, holds sensor firmly in place, capturing vertical or horizontal images of the molars and premolars.

4007

ENDO GREEN

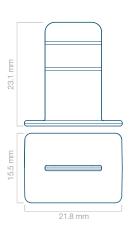

Holds sensor firmly in place to provide accurate images for x-ray canal diagnosis and treatments.

4009BITE TAB RED

Holds sensor firmly in place when positioning for bite wing x-rays.

the peel'n'stick adhesive design

The simple peel'n'stick adhesive design makes the sensor holder quick and easy to apply, saving time during dental procedures. It provides a secure fit, reducing the risk of slippage or movement during x-rays.

universally compatible

Our peel-n-stick sensor holders are universally compatible with all standard aiming arm and ring positioning systems, this ensures seamless integration with your current dental x-ray system.

why choose single use over autoclavable?

1.

No risk of cross contamination, makes them safer to use.

2.

Convenient and efficient to use compared with autoclavable alternatives.

3

Cost and resource savings – no product wear and tear or time spent autoclaving.

4

Availability - no waiting for sterilisation cycles - you just grab a new one when needed.

5

Comfort and flexibility – the thinner, lightweight design of single use holders are less rigid than autoclavable ones, improving patient comfort.
